## **Ready Solar Creates the Solar-in-a-Box Industry with Immediate Product Availability**

*System Takes Less than Half the Time to Install than Traditional Solar*

**San Mateo, CA – April 29, 2009** – Ready Solar Inc., announced today immediate availability of the solar industry's first pre-assembled rooftop solar system, the SOLAR IN A BOX™, for residential and light commercial solar system deployments. The system opens the multi-billion dollar solar industry to general contractors, electrical contractors, homebuilders and other trades-people with basic electrical proficiency. The system cuts installation time of solar systems by more than half.

The SOLAR IN A BOX is a turnkey, all-AC solar rooftop system. Because components are pre-engineered and pre-assembled, it is the easiest and most cost-effective way to install solar power systems.

### **Features of the SOLAR IN A BOX include:**

- Fully modular, pre-assembled units designed for rapid installation
- Patented mounting frame and brackets: No more measuring and cutting racking
- Pre-installed micro-inverters: No more inverter installation or DC wiring
- Solar modules pre-wired and grounded to NEC code
- Simple system sizing and sales tools
- Fast-track Permit pack
- Installation guide and training
- 15-year system warranty with 25 year panel warranty

According to Bob Giles, CEO of Ready Solar, "As the first-ever pre-assembled solar rooftop system, the SOLAR IN A BOX is exactly what the name implies. It significantly reduces the cost and time of residential and light commercial solar installation. The only thing an installer needs to provide is the wiring and conduit or Romex from the roof to the service box, since that is site-

specific. For the first time, there is no need for equipment selection and engineering, string sizing, measuring and cutting aluminum rails, grounding of modules and rails, or installing inverters and DC disconnect.” Ready Solar also provides comprehensive training, marketing and support services for installers.

According to Rick Nelsen of Green Scene Solar in Payson, Arizona, “I installed my first system after just two training sessions with no issues. Ready Solar’s technology enabled me to easily get into the solar business and I have now switched the focus of my home-building business to the rapidly expanding solar contractor business.”

### **About Ready Solar**

Ready Solar created the solar-in-a-box industry, changing the way residential solar electric (photovoltaic) systems are installed. The company’s turnkey systems, pre-engineered and pre-assembled with the first All-AC components, are the easiest and most cost-effective way to install rooftop solar for general contractors, electrical contractors, homebuilders and other trades-people with basic electrical proficiency.
